

## Single level platform

### Short description:

---

The single level platform transforms a shelving installation into a storage and warehousing platform.

The single level provides great modularity.

Put all the available volume to work for you and double your working area with a single level industrial mezzanine. You gain space on the floor and save all around (heating, lighting, protection, fire prevention, handling, insurance?)

Will your needs change?

The platforms are modular and can be altered as often as necessary.

Mesh partitions can be incorporated to create protected zones for high value products.
