

Cantipro exterior use with cover

Short description:

Patented system. Robust for storing pipes, profiles, bars, sheets, panels, etc.

Description:

The cantilever makes it possible to safely store long loads, handled by machines, and the self-supporting structure allows wood to be stored under shelter. the CANTIPRO is the first cantilevered shelving system whose profiled thin wall column is put together with rivets and bolted to its base, thereby making it easier to maintain and move. The entire range has been certified by Bureau VERITAS as meeting the current standards applicable to this type of construction and specifically the Eurocode 3 European rules.
